- Full Victron energy system, solar panels, shore line
- LED lighting
- Single gas ring and sink
- Interior curtains
- Swivel double passenger seat

FSL converted this Toyota Proace into a premium camper van, creating a versatile vehicle that combines everyday practicality with the comfort and convenience of a luxury touring vehicle. Every aspect of the conversion was carefully designed to maximise the available space while delivering a high-quality finish, making it equally suited to weekend getaways or extended trips.

The bespoke interior features luxury trim throughout, creating a bright, modern and comfortable living space. A practical kitchen area incorporates a durable work surface, a plumbed-in sink and an integrated fridge, while additional storage compartments provide ample space for equipment, clothing and personal belongings. Integrated lighting and conveniently positioned 240V mains sockets ensure the vehicle remains comfortable and functional whether on the road or connected to campsite facilities.

The flexible living area includes a folding table for dining or working, with the seating quickly converting into a comfortable bed for overnight accommodation. A sunroof enhances the feeling of space by allowing natural light and ventilation into the cabin, while the exterior awning extends the usable living area outdoors, providing shelter for relaxing or dining in all weather conditions.

Combining quality craftsmanship with thoughtful design, this Toyota Proace conversion demonstrates FSL's ability to create bespoke camper vans that are both stylish and highly practical, tailored to meet the individual requirements of each customer.
